

## ABSTRACT OF THE DISCLOSURE

A disk cartridge incorporating a disk-shaped recording medium and having an opening portion for carrying out a recording and/or reproducing operation by a recording and/or reproducing device. A disk holder is arranged at the disk cartridge for holding the disk-shaped recording medium and is configured so as to be mountable to a disk cartridge main body along with the disk-shaped recording medium and detachable from the disk cartridge main body outside of the disk cartridge so that the disk holder holds the disk-shaped recording medium independent of any orientation of the disk holder and the disk-shaped recording medium when the disk holder is detached outside of the disk cartridge. The disk holder holds information in respect of the disk-shaped recording medium which is presented in or by a recessed portion formed in a portion of the disk holder.
